PROFILES

[LinkedIn: nabeelhussain](#)

[GitHub: Nabeelhusa](#)

SKILLS

Web Development

- React.js & TypeScript
- JavaScript, HTML5, CSS3
- Tailwind CSS & Vite
- Responsive UI & Figma

AI / Machine Learning

- Machine Learning
- TensorFlow.js & MediaPipe
- Computer Vision
- Deepfake Detection
- Generative AI (Azure)

Programming

- C++ & OOP
- Data Structures & Algorithms

Other

- Git & Vercel
- Database Management
- Network Security
- IoT: ESP32 & Arduino
- Visual Paradigm (UML)

EDUCATION

BS Software Engineering

Mirpur University of Science & Technology (MUST)

Sep 2022 - Sep 2026

CGPA: 3.15 / 4.00

CERTIFICATION

Develop Generative AI Apps in Azure

LANGUAGES

Urdu - Native

English - Limited Working

PROFILE

Software Engineering graduate (CGPA 3.15/4.00) from MUST, seeking a web development role that combines modern frontend engineering with AI and machine learning. Experienced in building responsive React/JavaScript applications through professional internships, with a strong foundation in OOP, data structures and algorithms, and databases. Built a browser-based, on-device deepfake detection system with TensorFlow.js and MediaPipe as a final year project, alongside cybersecurity training and IoT projects.

EXPERIENCE

Frontend Developer (Intern)

Mar 2026 - Apr 2026

DevelopersHub Corporation, Islamabad (Remote)

- Developed and maintained responsive user interfaces for an e-commerce prototype and the Nexus web platform.
- Translated Figma UI/UX wireframes into functional, multi-page layouts using HTML, CSS and JavaScript.
- Built Nexus components in React.js: meeting scheduling calendars, video-call UI controls, document management modules and payment transaction history tables.

Network Security Intern

Mar 2026

Tech Hierarchy (Remote)

- Completed a 4-week cybersecurity internship focused on practical network security.
- Completed hands-on security tasks within strict deadlines while maintaining professional and ethical conduct.

PROJECTS

Deepfake Shield (Final Year Project)

[Live Demo](#) | [GitHub](#)

- Real-time deepfake detection and forensics web app built with React, TypeScript, Vite, TensorFlow.js and MediaPipe. Runs entirely in the browser, so no user data leaves the device.
- Designed an eight-layer analysis pipeline fused into a 0-100 trust score: CNN image analysis, rPPG pulse detection, blink and eye dynamics, head-pose stability, facial anatomy and spectral noise analysis.
- Added live telemetry, CSV export and PDF/Markdown forensic reports; deployed on Vercel. Tested on a small internal set of real and synthetic frames.

Business Nexus Platform

[Live Demo](#) | [GitHub](#)

- React.js web platform connecting entrepreneurs and investors, with meeting scheduling calendar, video-call UI controls, document management and payment transaction history modules.

E-commerce Website

[GitHub](#)

- Responsive multi-page e-commerce frontend built from Figma wireframes using HTML, CSS and JavaScript.

IoT & Embedded Projects (C++)

- Smart Parking System:** ESP32 with two ultrasonic sensors and red/green LED slot indicators; sends live slot status to ThingSpeak over WiFi. [Wokwi](#)
- Voting Machine:** keypad and LCD based system with EEPROM vote storage, winner display and password-protected admin reset. [Wokwi](#)
- Temperature & Humidity Monitor:** DHT22 sensor readings on an I2C LCD and serial monitor, with sensor error handling. [Wokwi](#)
